Tiled Sculptural System

Giles Miller Studio uses their signature techniques to array the tiles in a pre-designed mathematical manner in order to illustrate graphic content.

The studio has developed specific techniques which follow the GMS system to manipulate light and shade in order to illustrate these patterns and imagery.

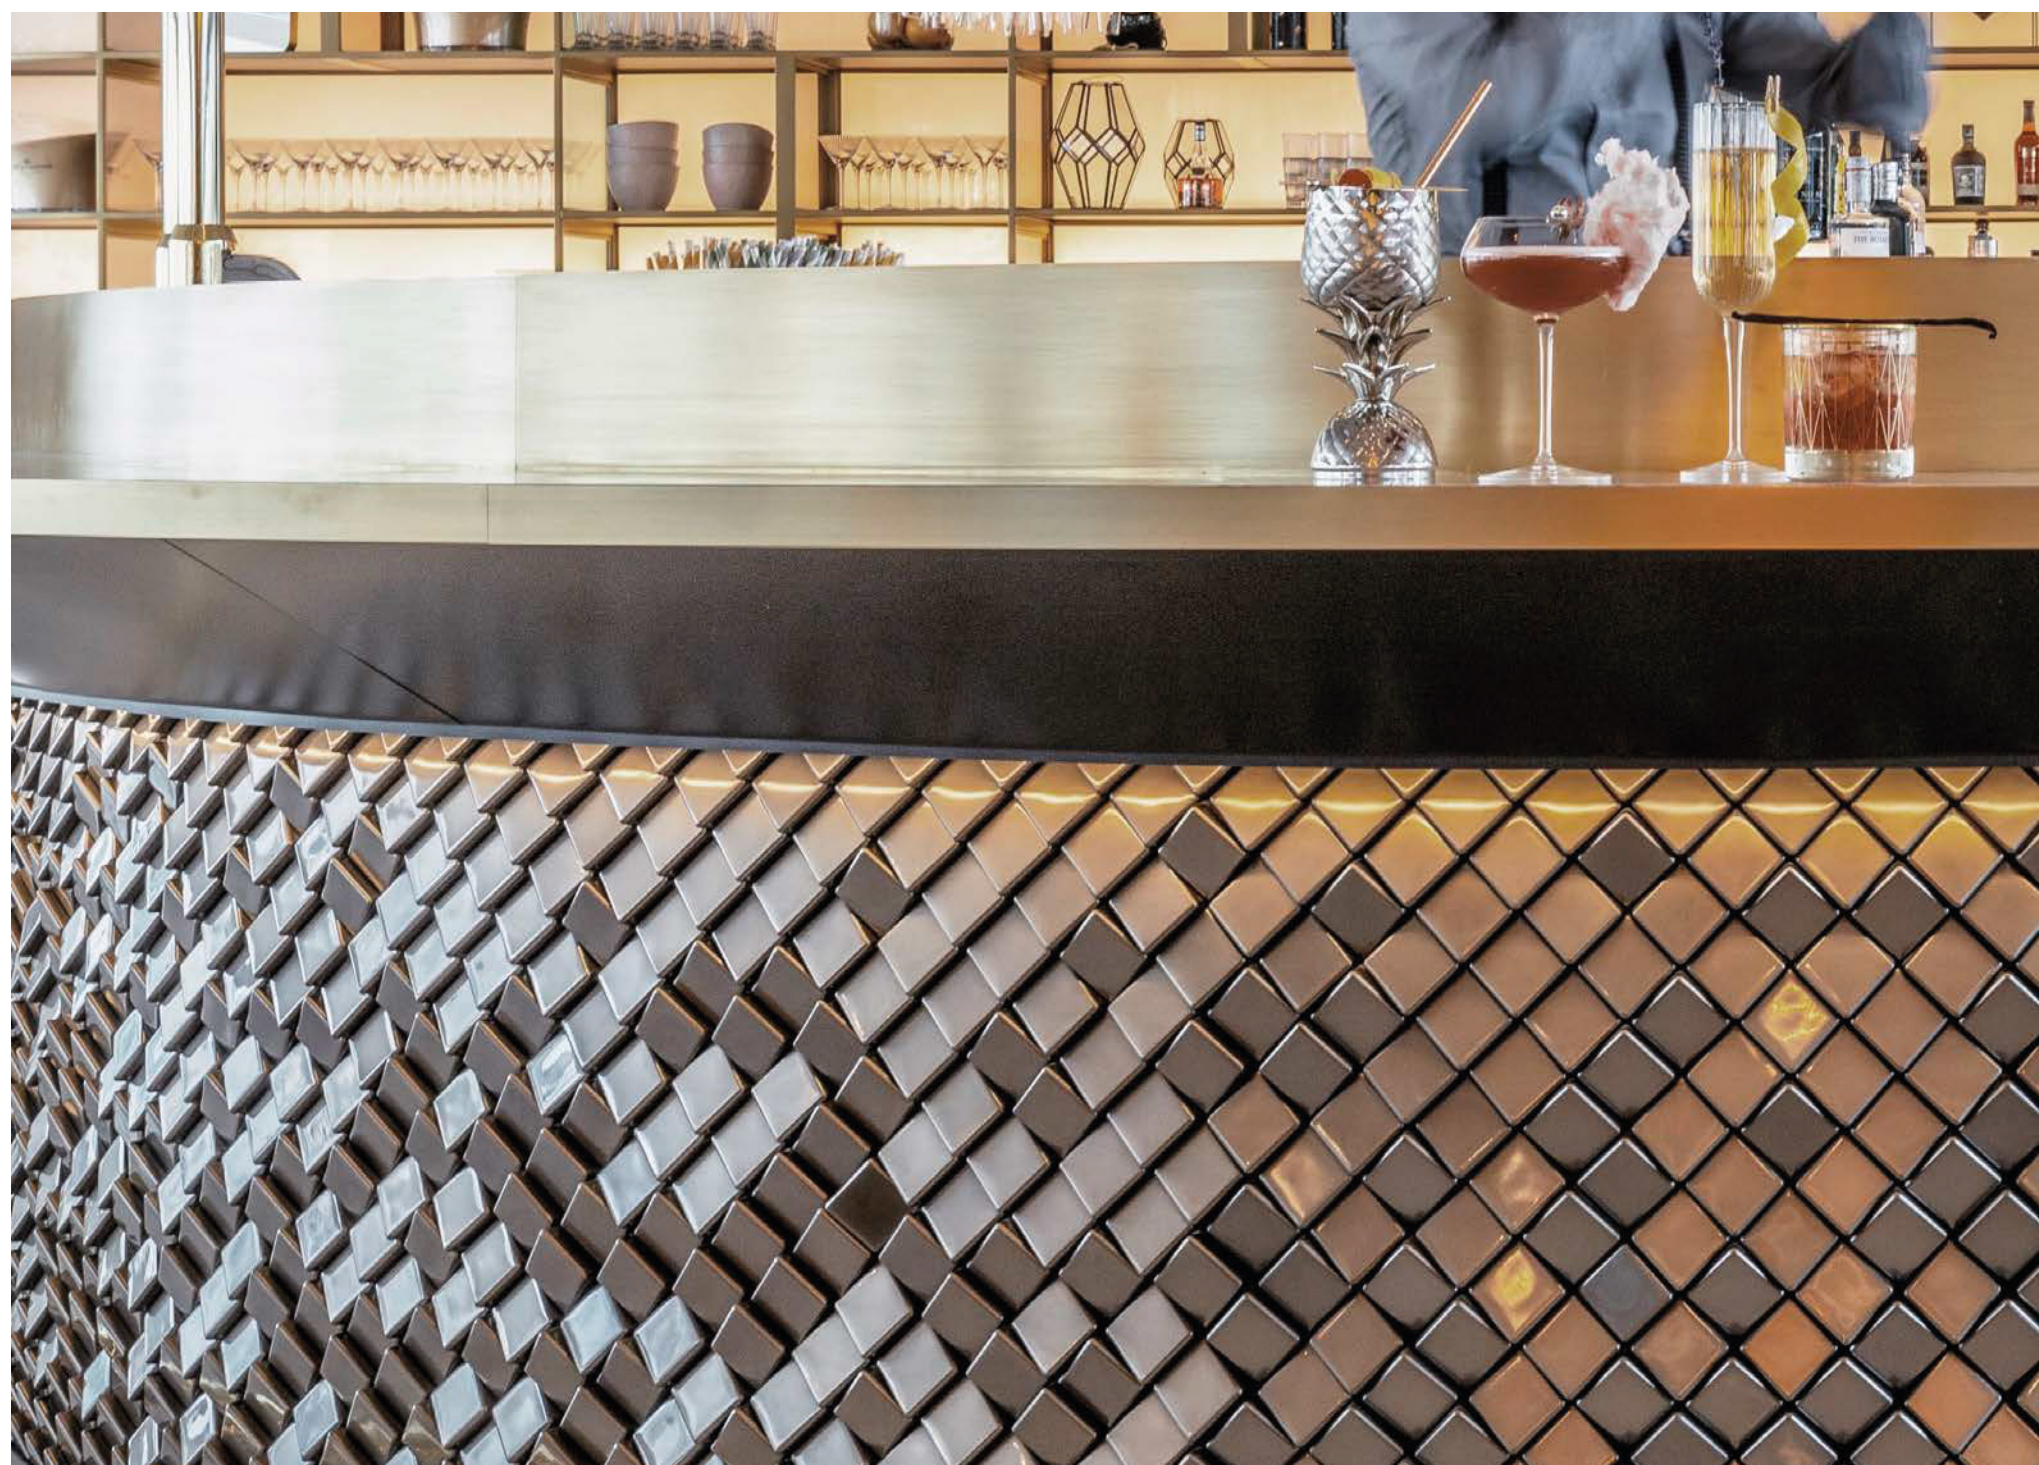

Vivi

Centre Point, London

The beautifully designed interior of Vivi Restaurant in London's Centre Point incorporated the studio's 'Harper' tile on the counter front at the main cocktail bar. Stunning interior design from Gordon Young and SAY Architects for Rhubarb.

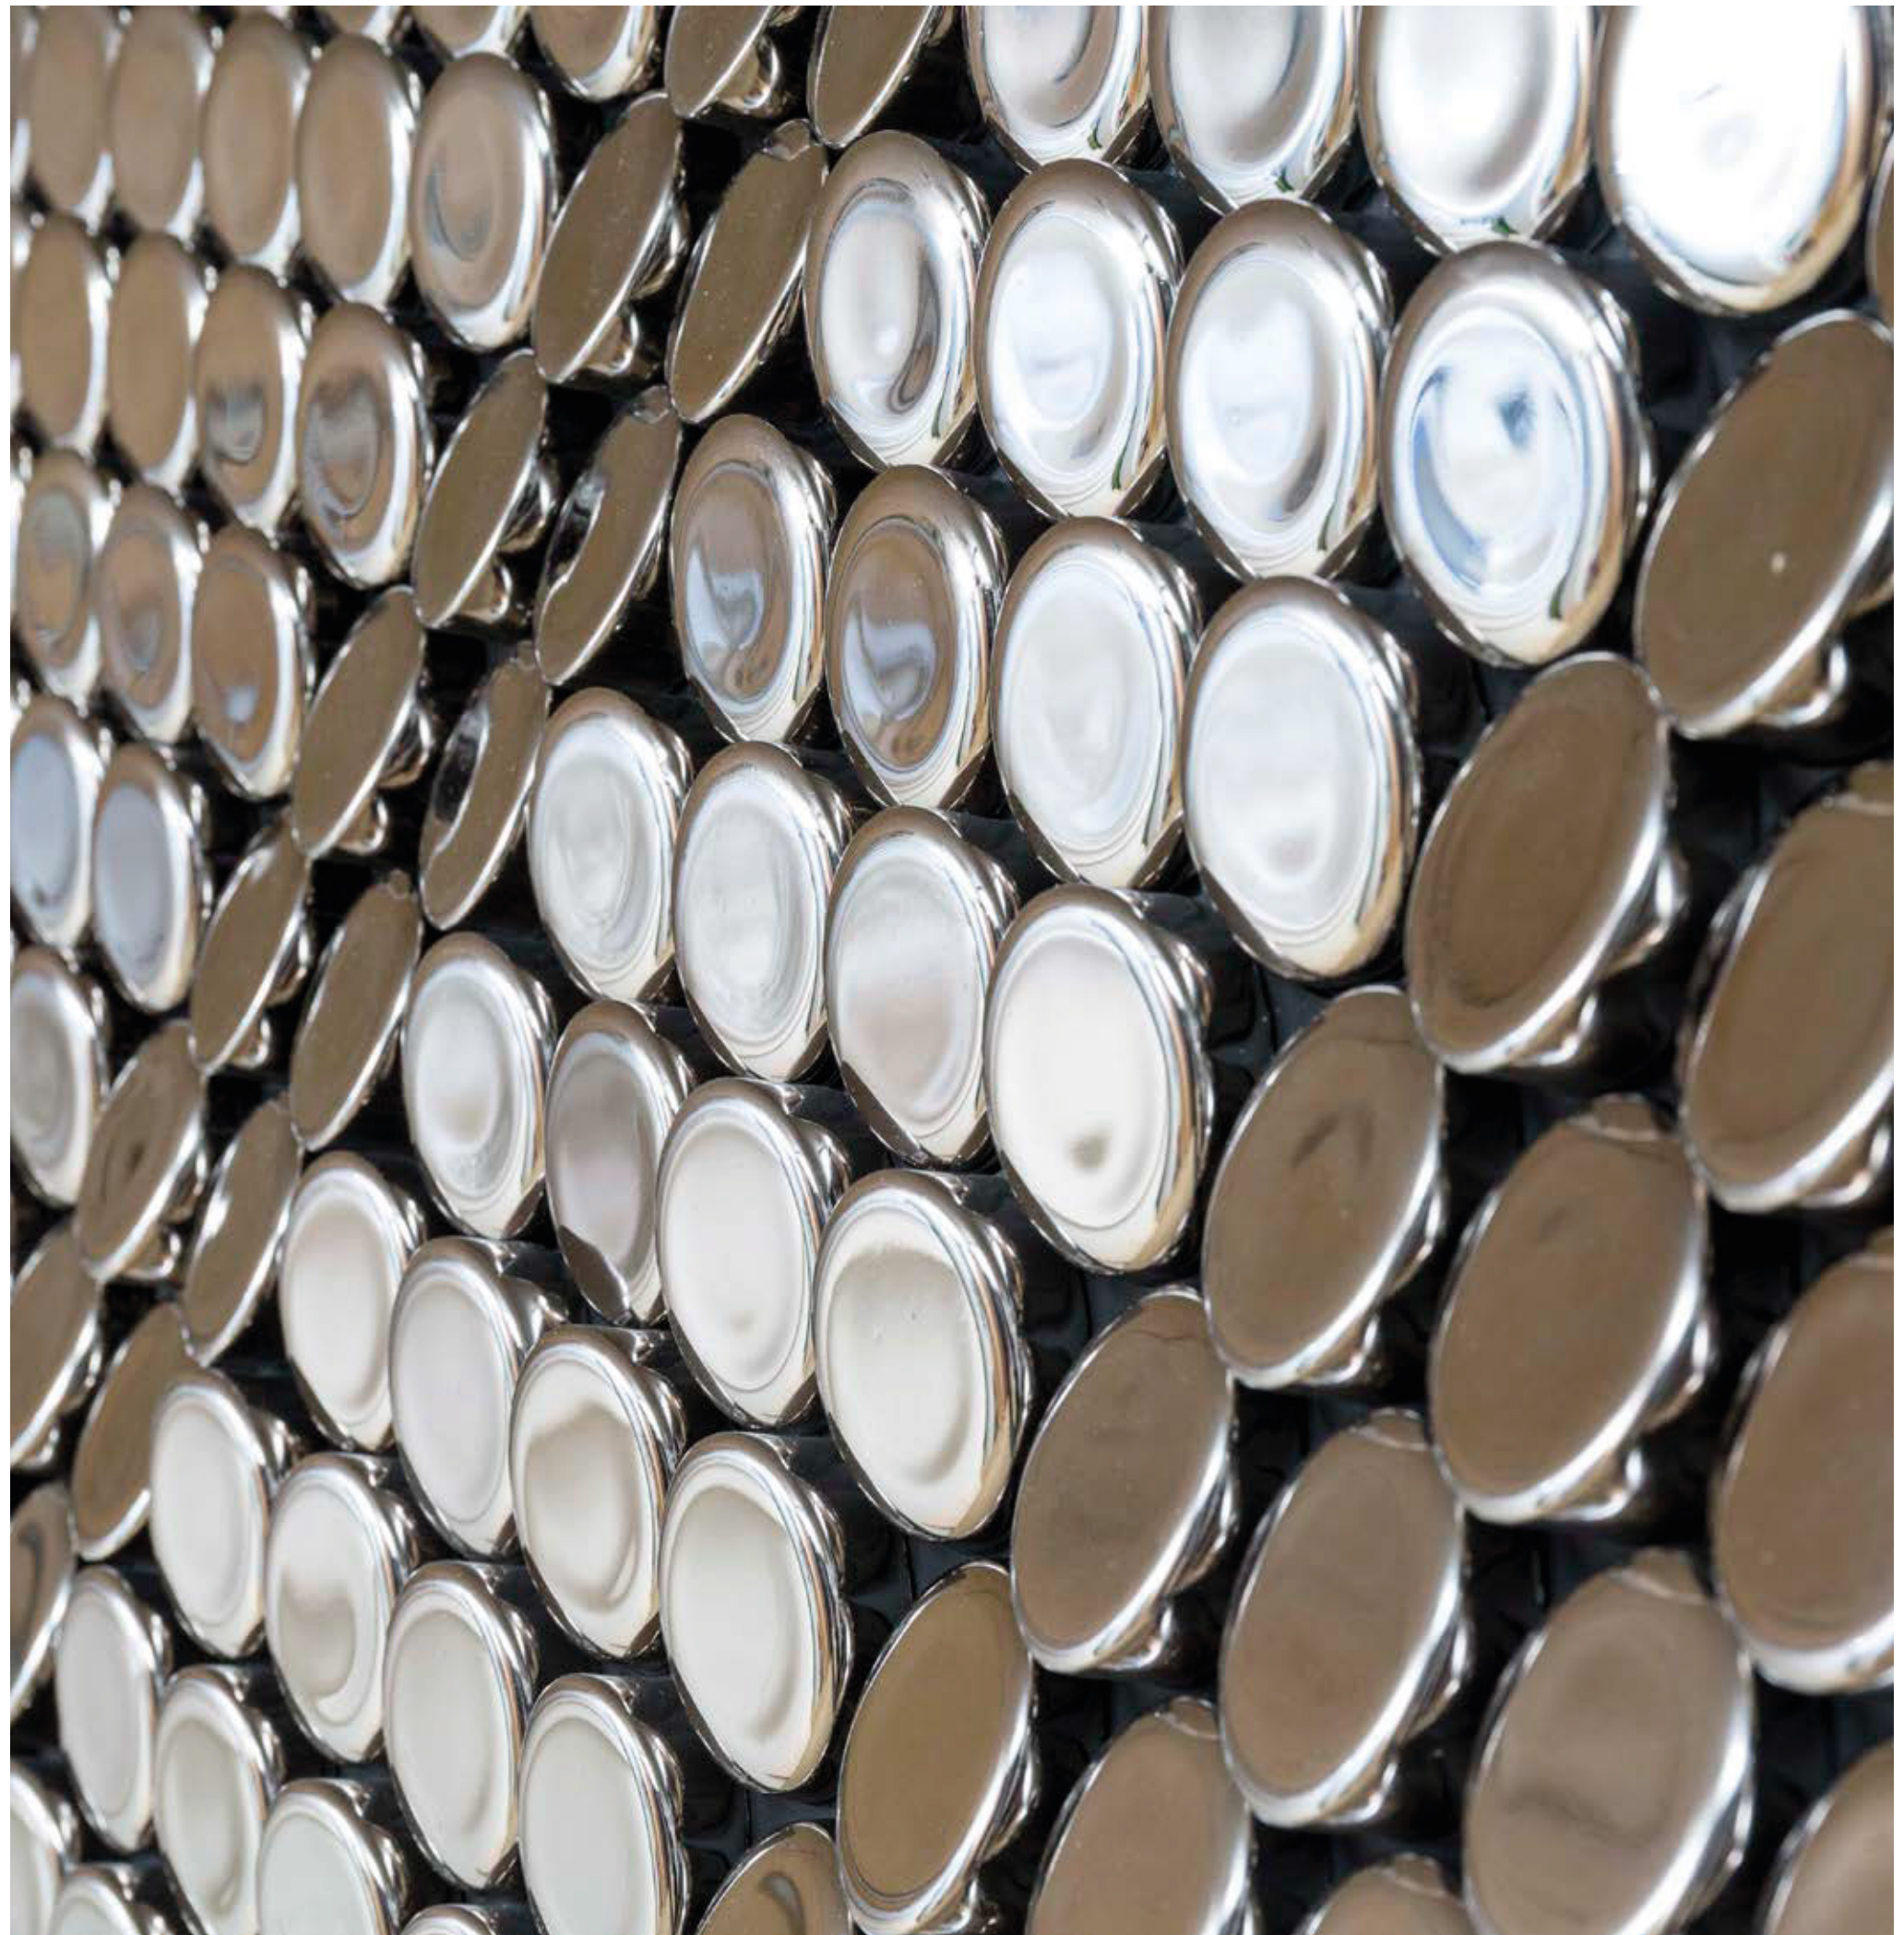

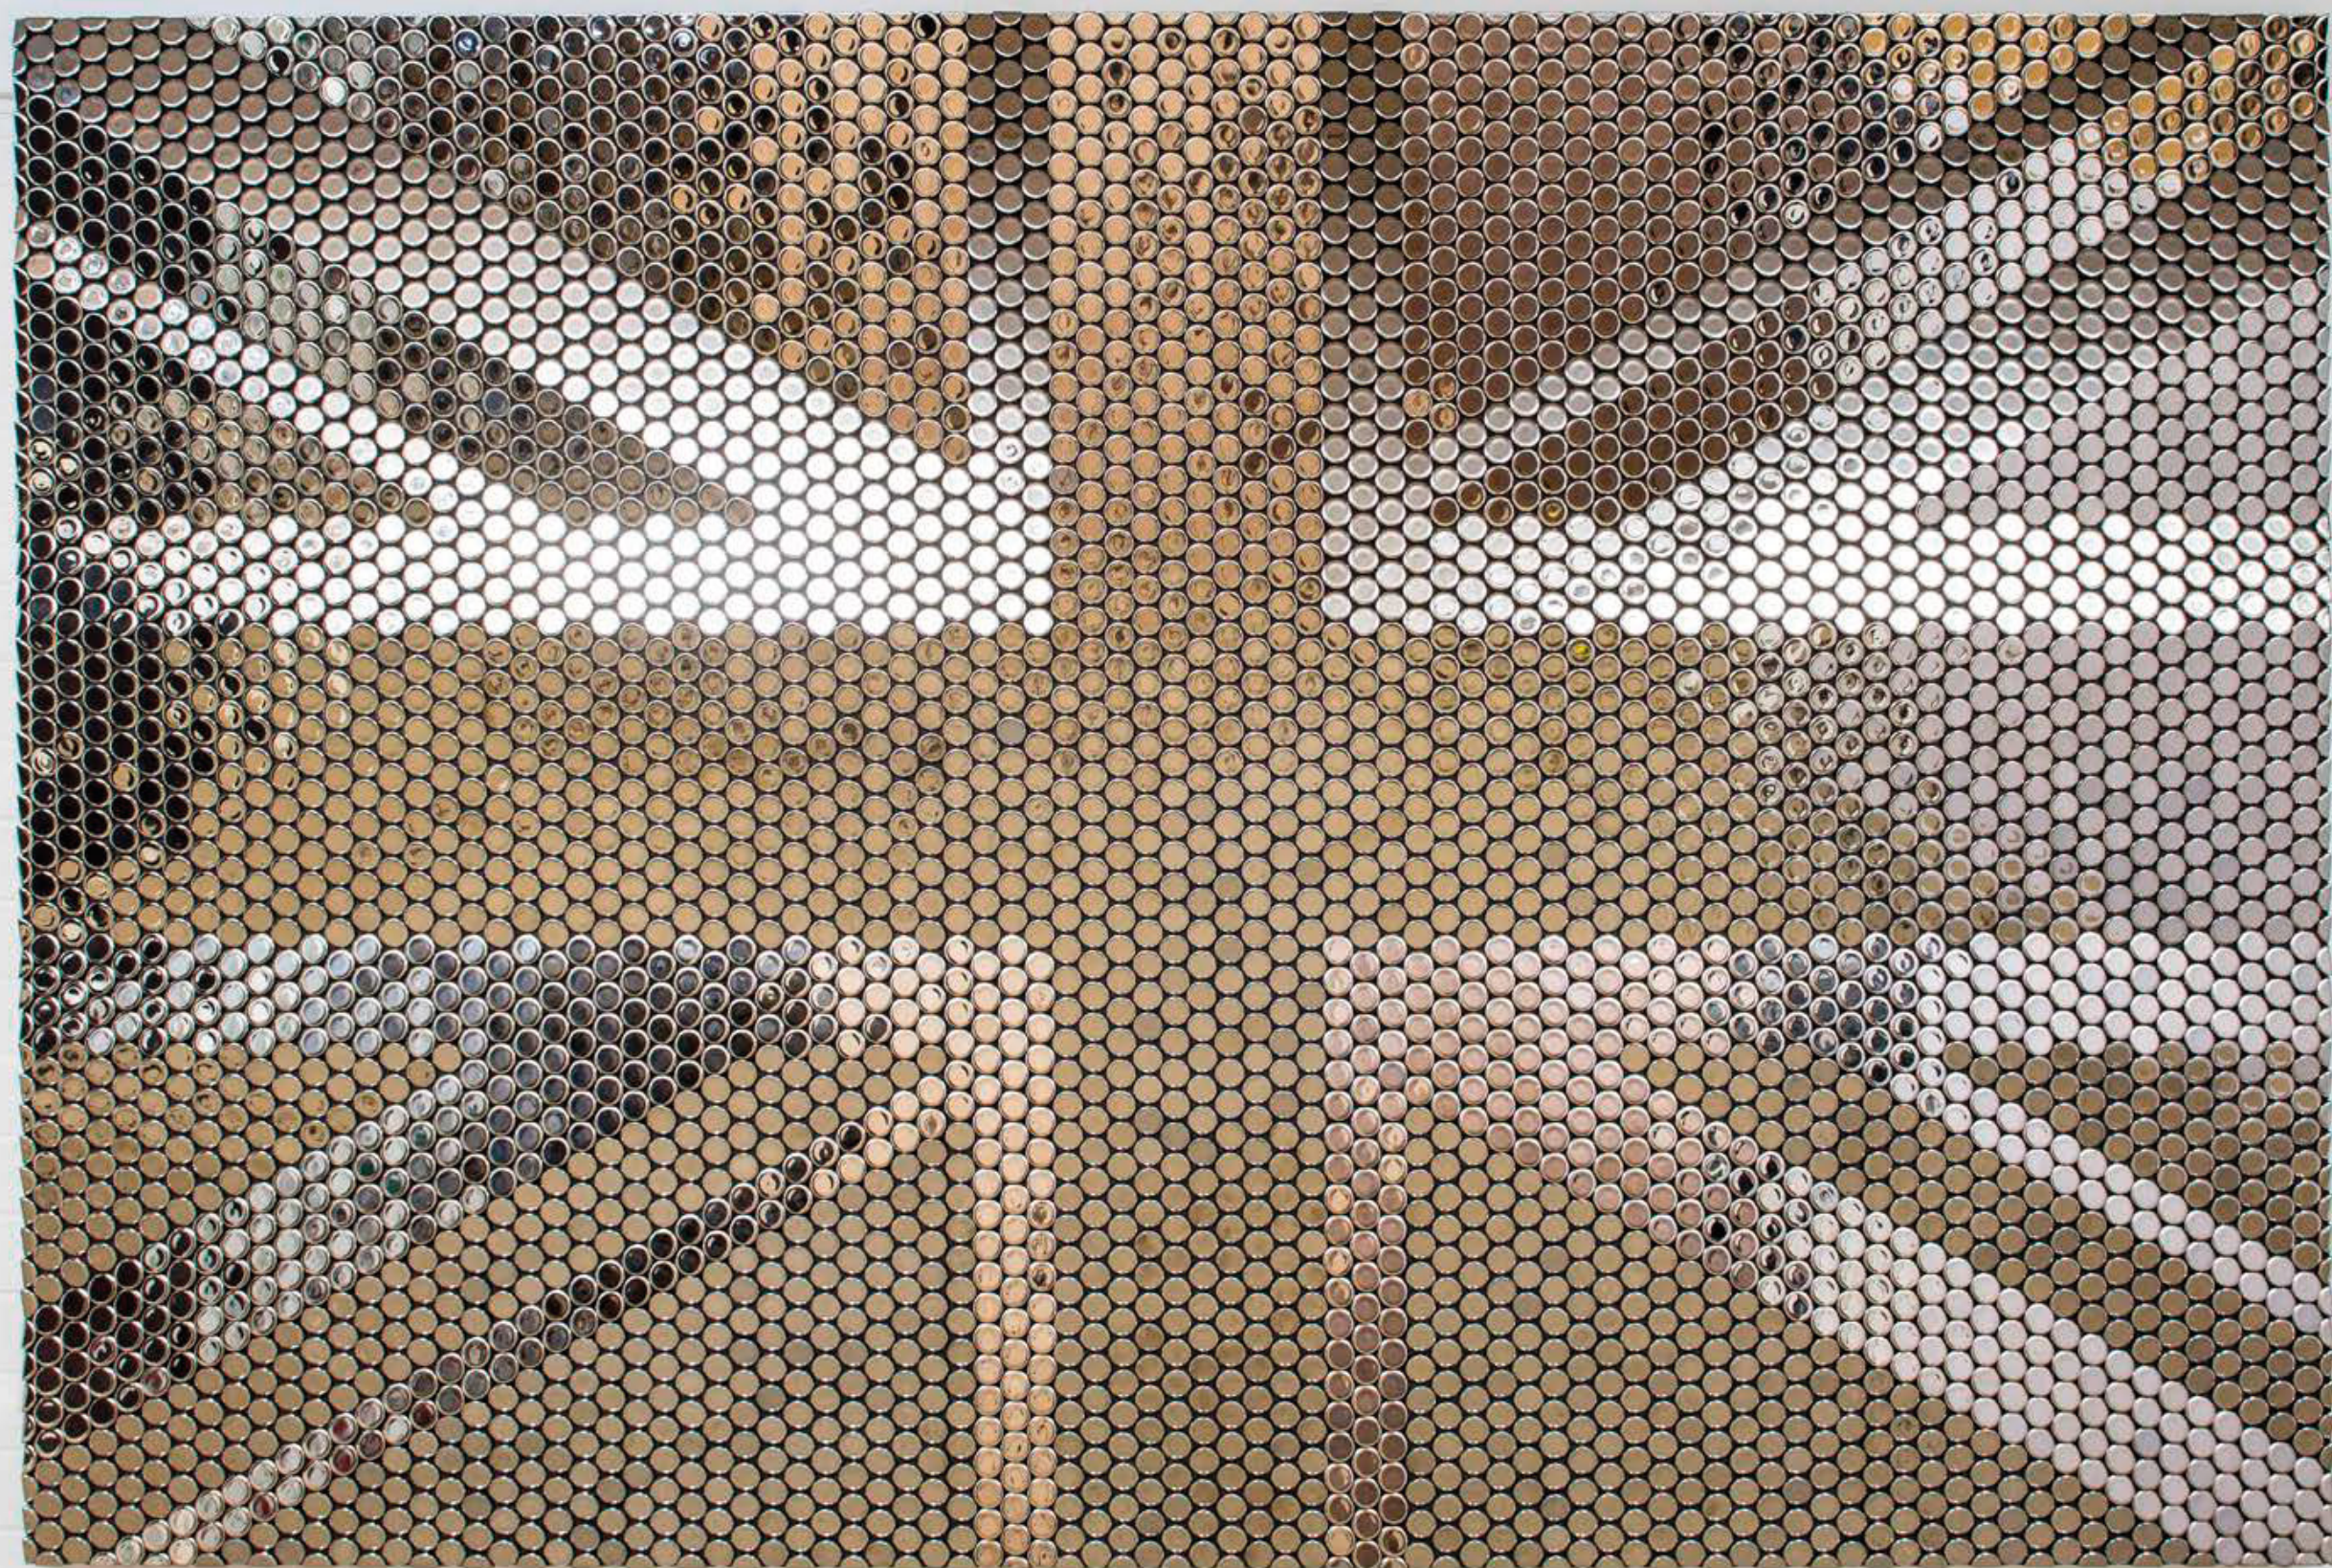

Union

Great Festival of Innovation, Hong Kong

The giant Union Flag is composed of hundreds of reflective ceramic 'pennies' which are angled to reflectively manipulate surrounding light, illustrating the tones of the flag as well as creating a kind of interaction in the surface when the viewer moves around it.

Union was created for the UK Department of Trade and has been touring the globe following it's first showcasing at the Asia Society in Hong Kong in 2018.

The Hub

Oslo, Norway

A unique use of our Alexander tiles, this large-scale installation in this scandinavian hotels' lobby incorporates a double curve which is executed with a series of fanned strips of surface artwork.

Design Cube

Greenwich, London

A contemporary Giles Miller Studio tile, the Marsden surface creates a sea of geometry, creating an intriguing feature surface.

A luxurious example of residential design the *Design Cube* project was designed by Amos & Amos and featured ceramic *Marsden* tiles in a random gradient composition.

Level Shoe District

Dubai, UAE

Commissioned to create a mural for the Womens VIP area at the Dubai Mall Shoe District, the studio worked alongside interior designers Shed to produce a tailor-made ceramic wall covering featuring tiles arrayed in floral formations in a variety of ceramic finishes.

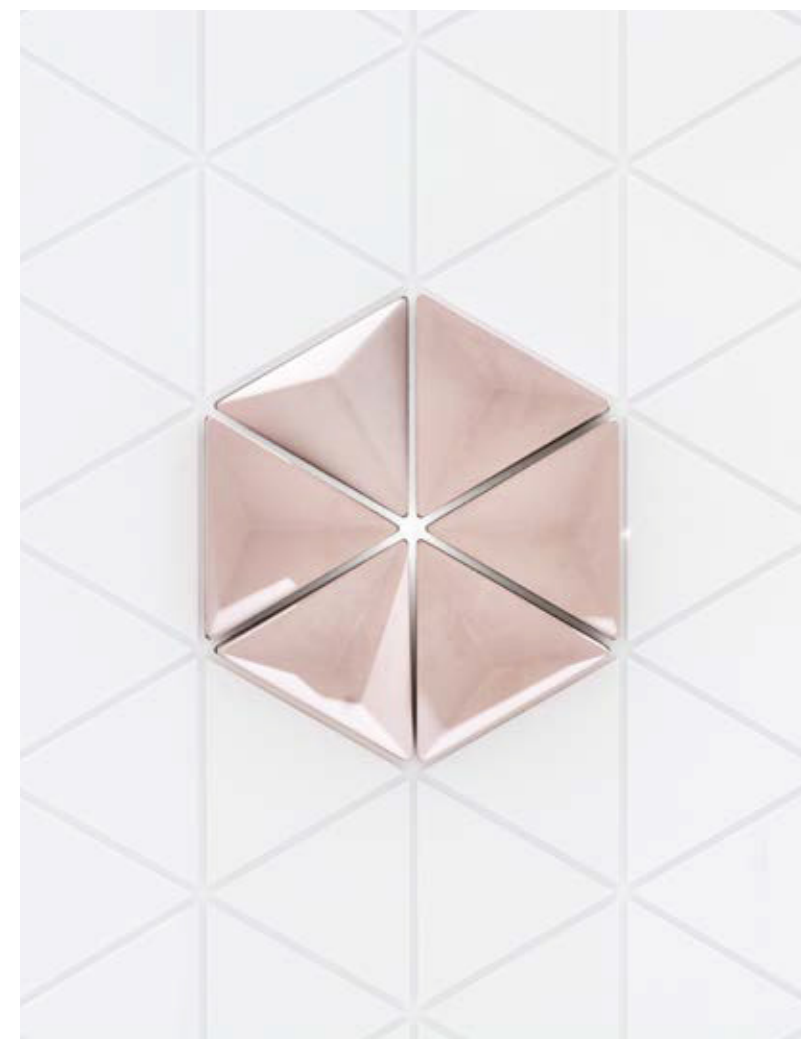

Yas Mall

Abu Dhabi, UAE

Commissioned to create a unique surface system incorporating triangular 3-dimensional tiles, the studio produced both mirror and corian-backed surface artworks for the largest handbag store in the world, located in Yas Mall, Abu Dhabi. Our compositions framed stores including Burberry, Chanel, Dolce and Gabbana, Louis Vuitton and Fendi.

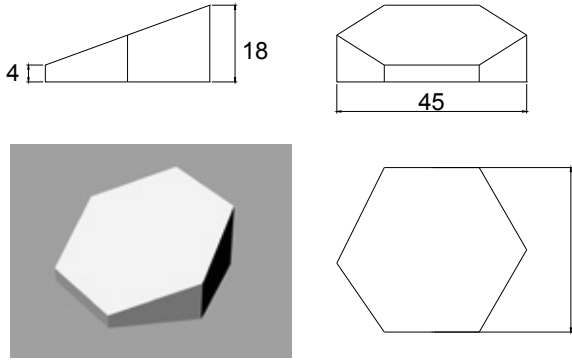

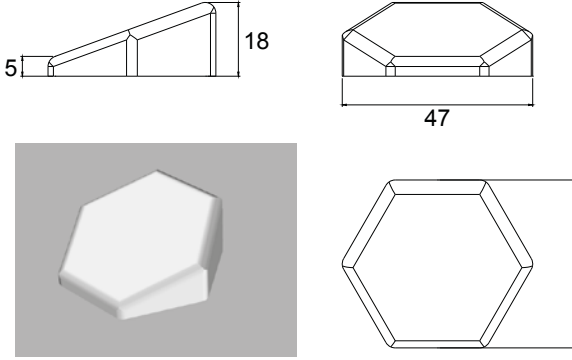

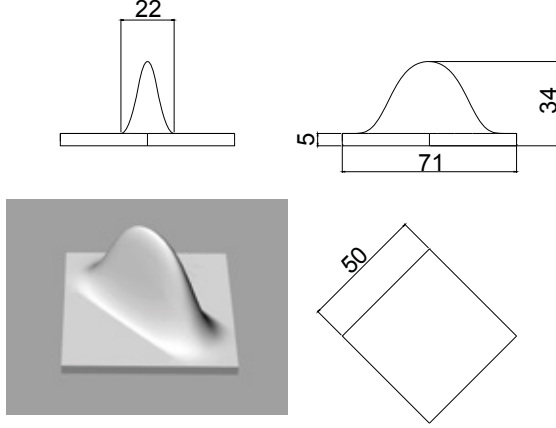

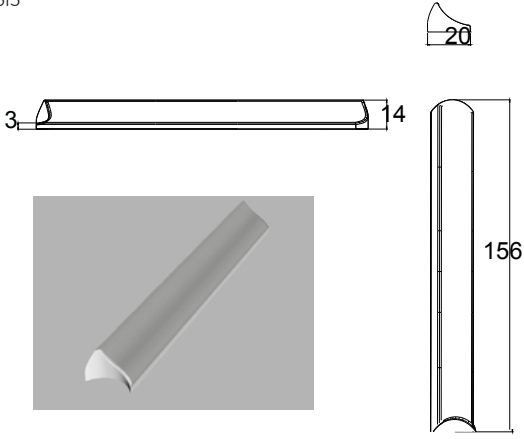

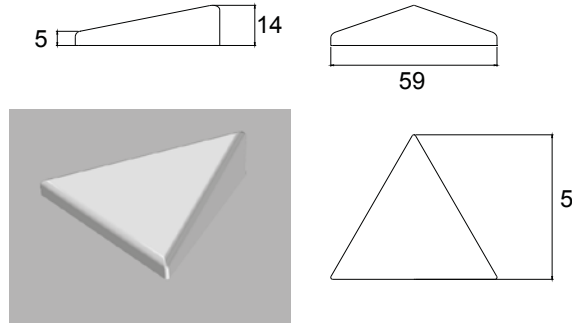

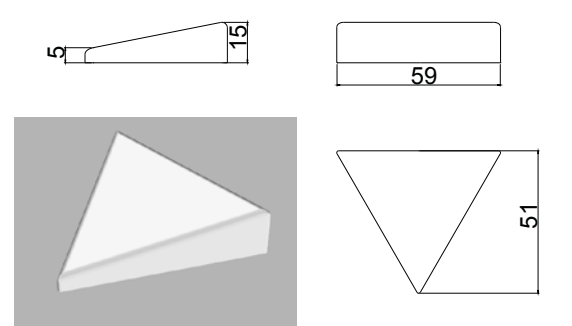

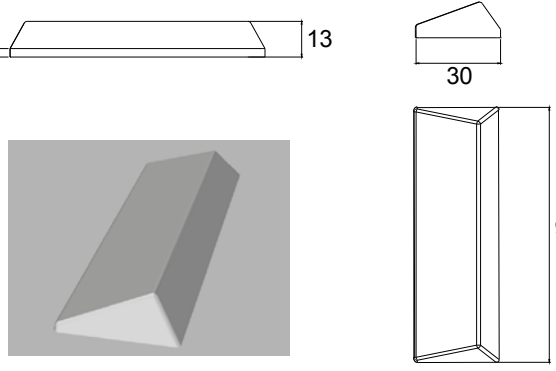

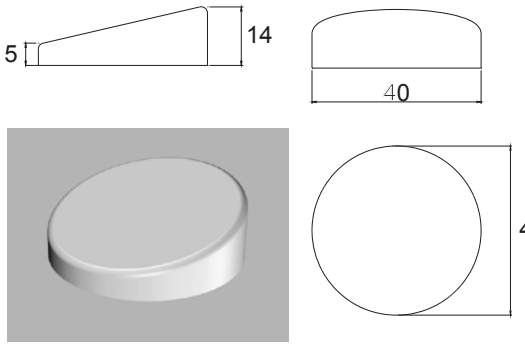

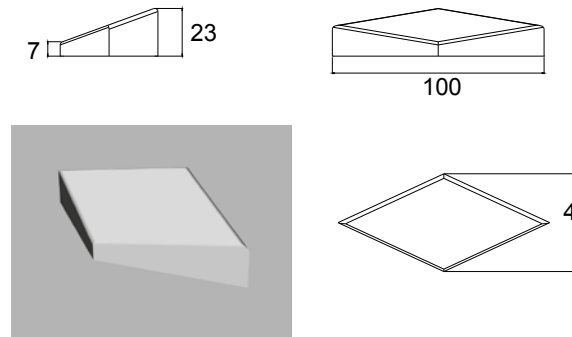

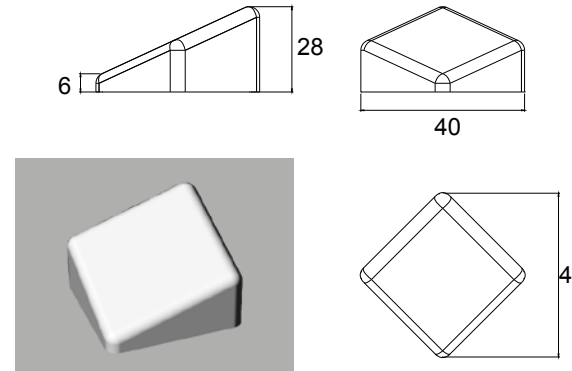

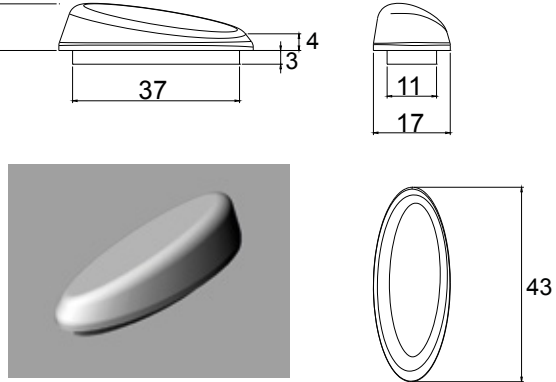

Bespoke design elements

Bespoke pixel shape

We have a diverse selection of shape available.

However, we are also able to create bespoke tile shapes (Tooling cost required).

<p>ALEXANDER (TIMBER)</p> 	<p>ALEXANDER (CERAMIC)</p> 	<p>FIN</p> 	<p>ENSIS</p> 
<p>MARSDEN - A</p> 	<p>MARSDEN - B</p> 	<p>FACET</p> 	<p>PENNY</p> 
<p>WELLINGTON</p> 	<p>HARPER</p> 	<p>DROPLET</p> 	<p>CUSTOM TILE SHAPES POSSIBLE (TOOLING COST APPLICABLE)</p>

Material and Finish Options

A wide variety of material and finish options are available. We can look into developing bespoke finishes if required.

Material and finish options available:

-Ceramic colour / gloss and matt - we can match to RAL and Pantone colours

- Timber / walnut and oak - we can source a wide range of timbers upon request

-Jesmonite plain / stone effect - we can match to RAL and Pantone colours

- Ceramic metallics / gloss, matt and crackle

-Cast metal / variety of metal finishes available including plating (gloss/matt/brushed/antique) powder coating (any RAL colour) and anodising in a range of colours

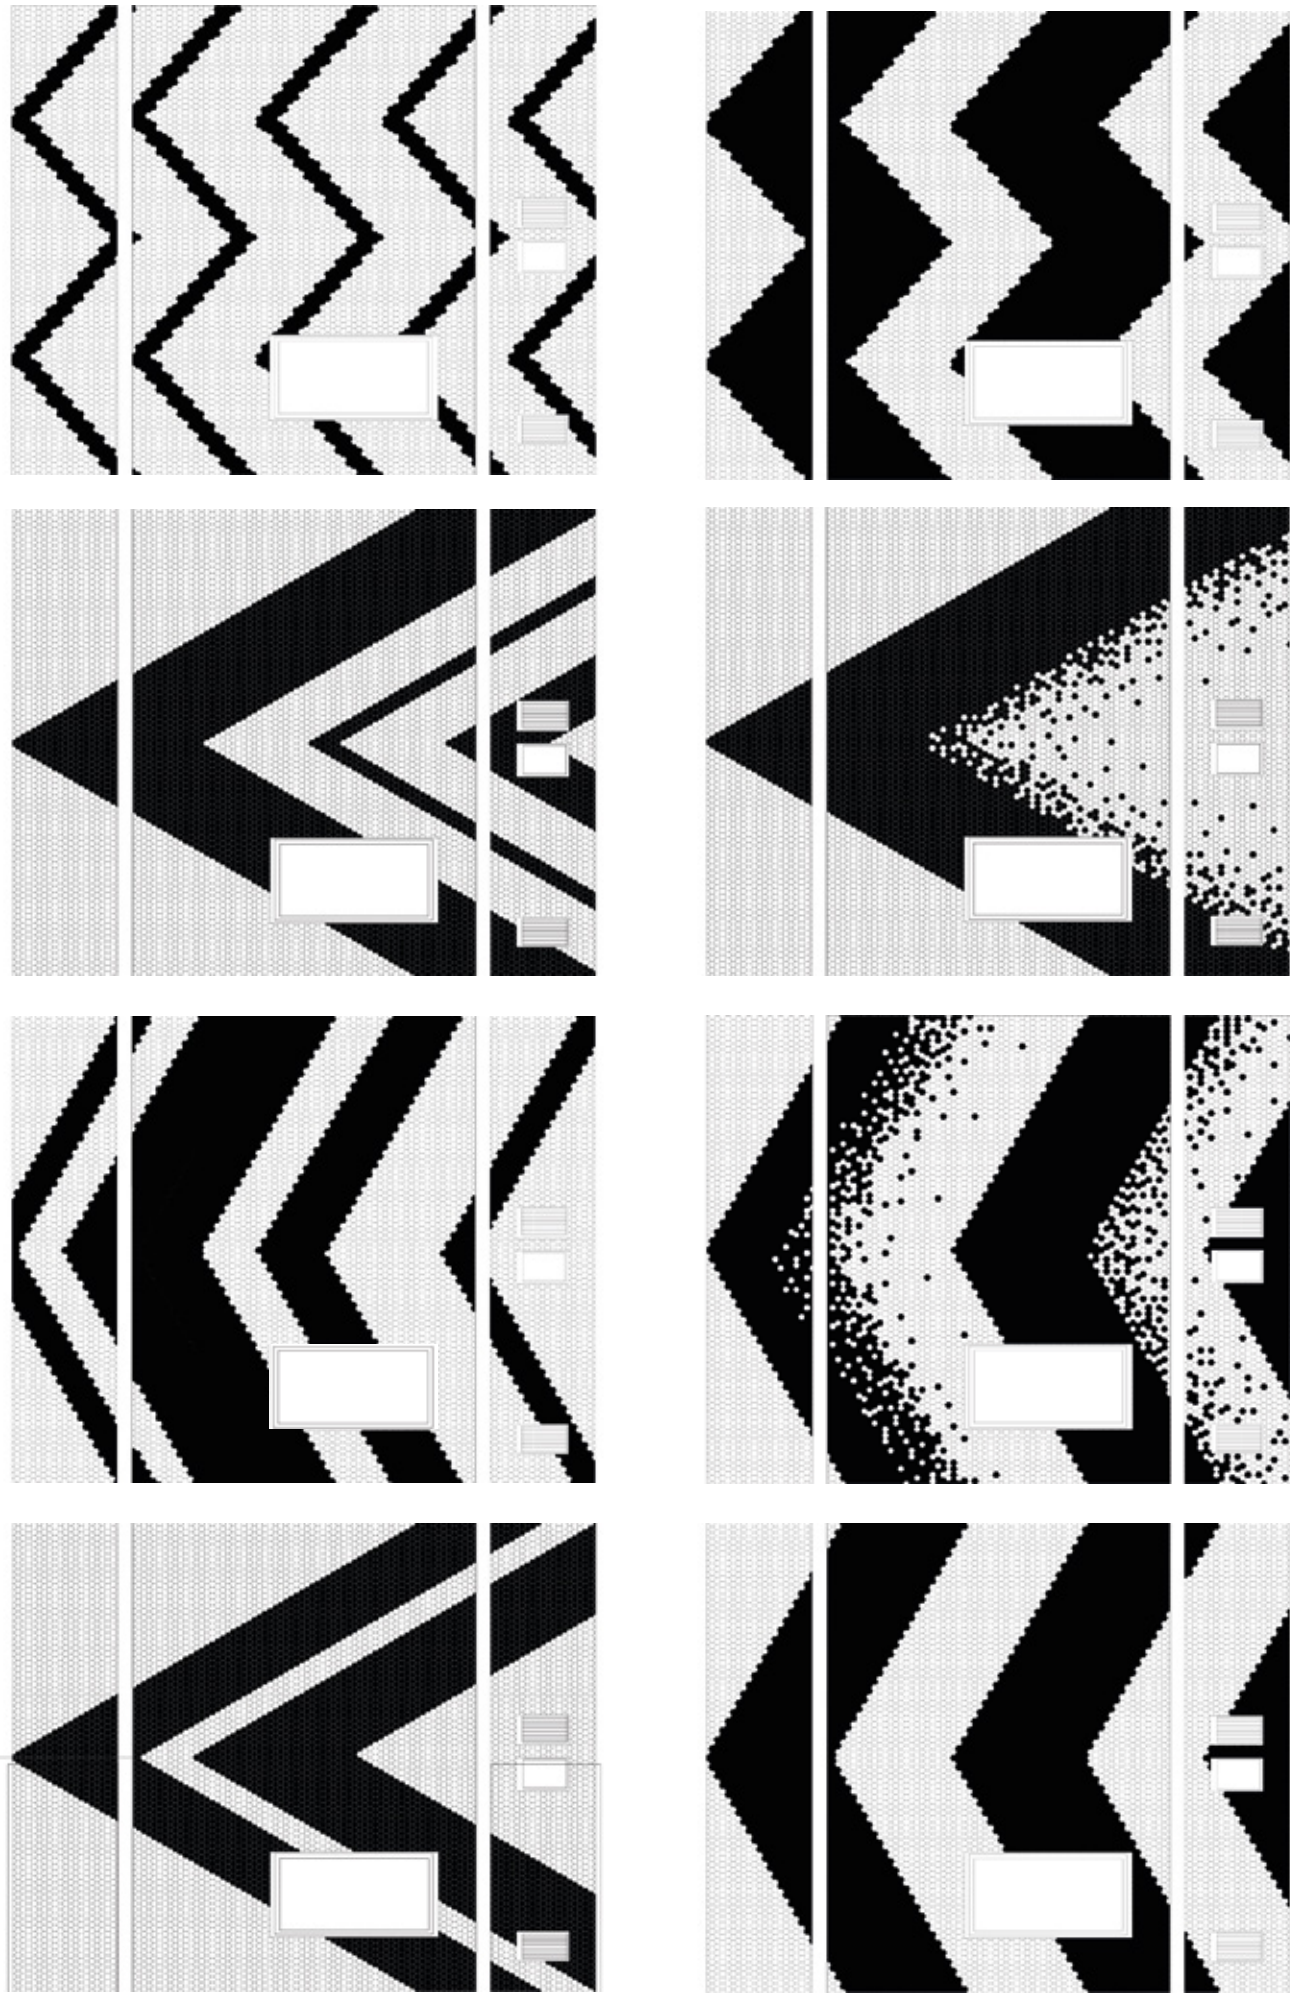

Artwork/Pattern

Giles Miller Studio work in collaboration with our clients in creating their bespoke artwork/pattern.

During the design phase of the project, we will put forward a selection of 2-dimensional artworks for consideration. These artworks can be in response to a specific brief (e.g Geometric patterns, florals or a brand Logo) or GMS can propose possible design concepts to work from.

3-dimensional sketch renders of the pattern can be produced, at request.

Assembly/Production

Giles Miller Studio's iconic tiled surfaces are meticulously hand assembled by our skilled production team. Our control of texture using innovative design and intricate fabrication techniques generates imagery, movement and character tailored to individual clients and contexts.

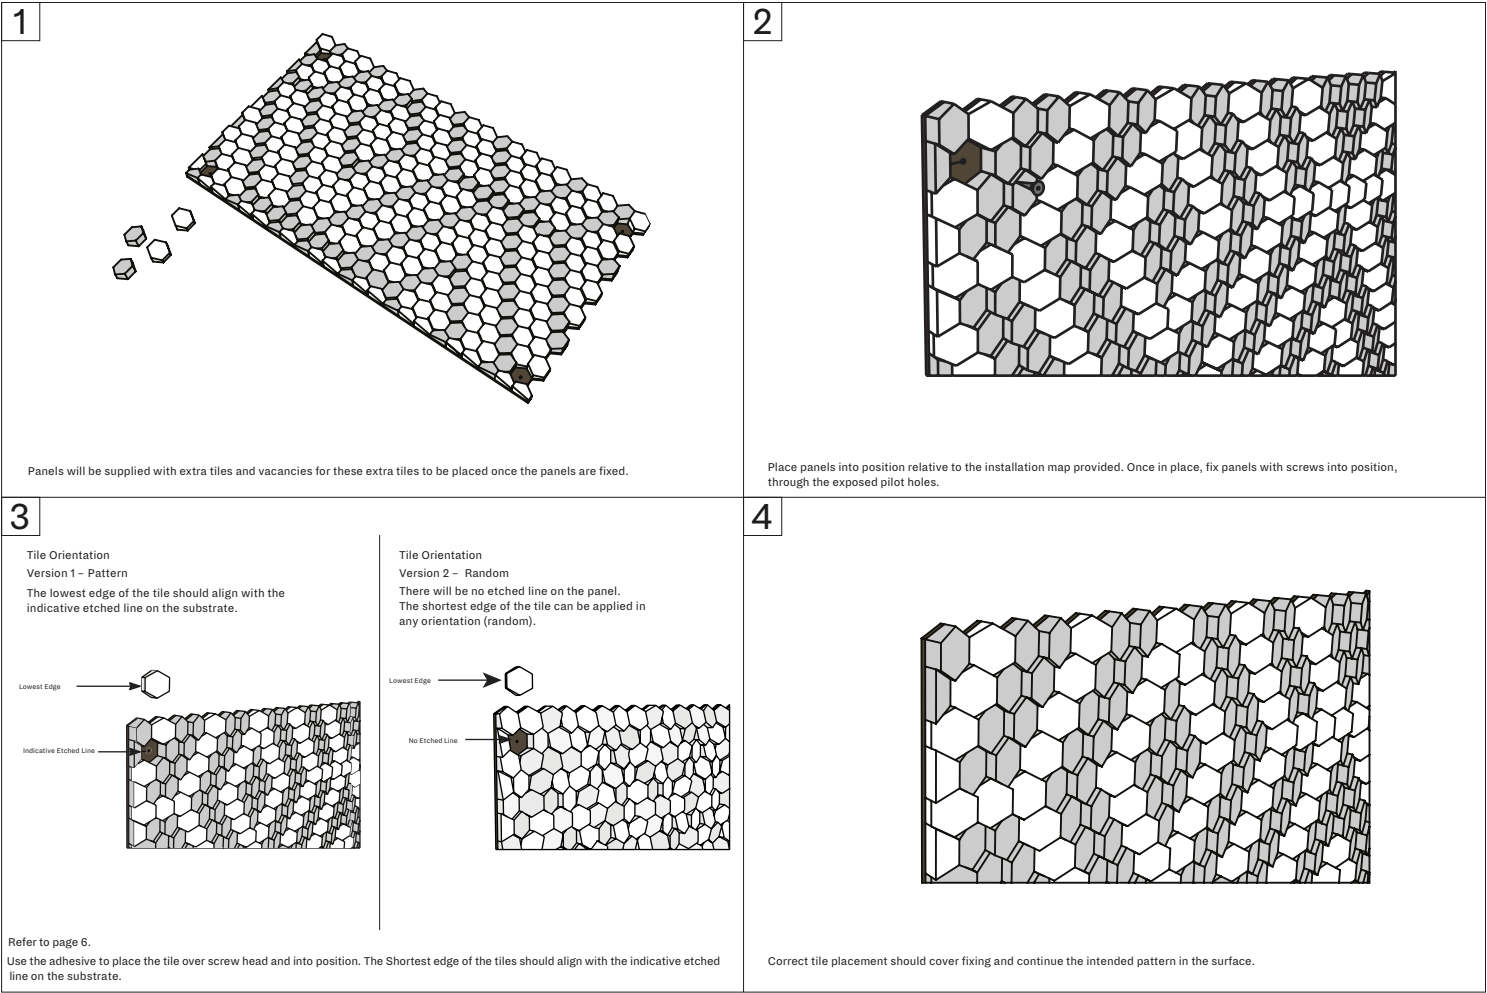

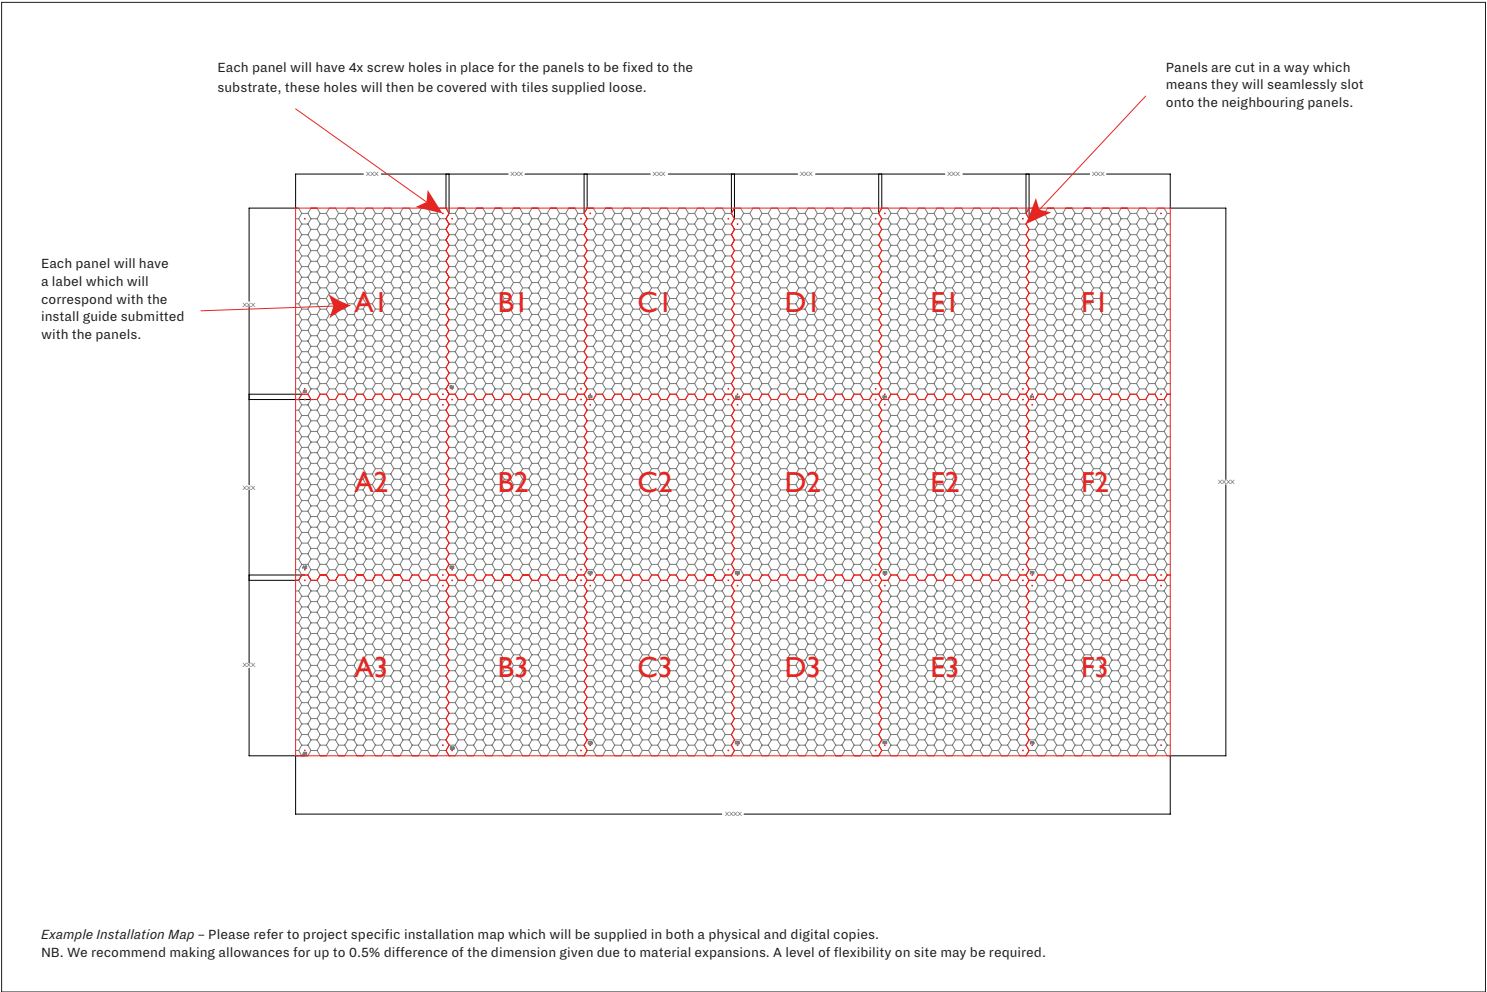

Installation

The project cost incorporates not only the production of these bespoke tiles, but also the artwork/pattern development and the hand assembly of the tiles onto panels.

The overall artwork will be split into panels (approximately 600x800mm) that fit together on-site. The panels will come clearly labelled along with a corresponding Installation guide.

With regards to installation:

- Panels fit together in a pre-calculated arrangement to ensure seamless joints.
- Then are screwed in to the wall at pre-marked points with loose tiles supplied in order to cover fixings.
- All panels are supplied along with the GMS installation guide and install map for contractors to follow.
- Panels can be installed using client/purchaser’s own contractors.
- There is an option of a GMS representative being present to oversee if requested at an extra agreed cost.
